# Let Claude Code use your browser and your computer

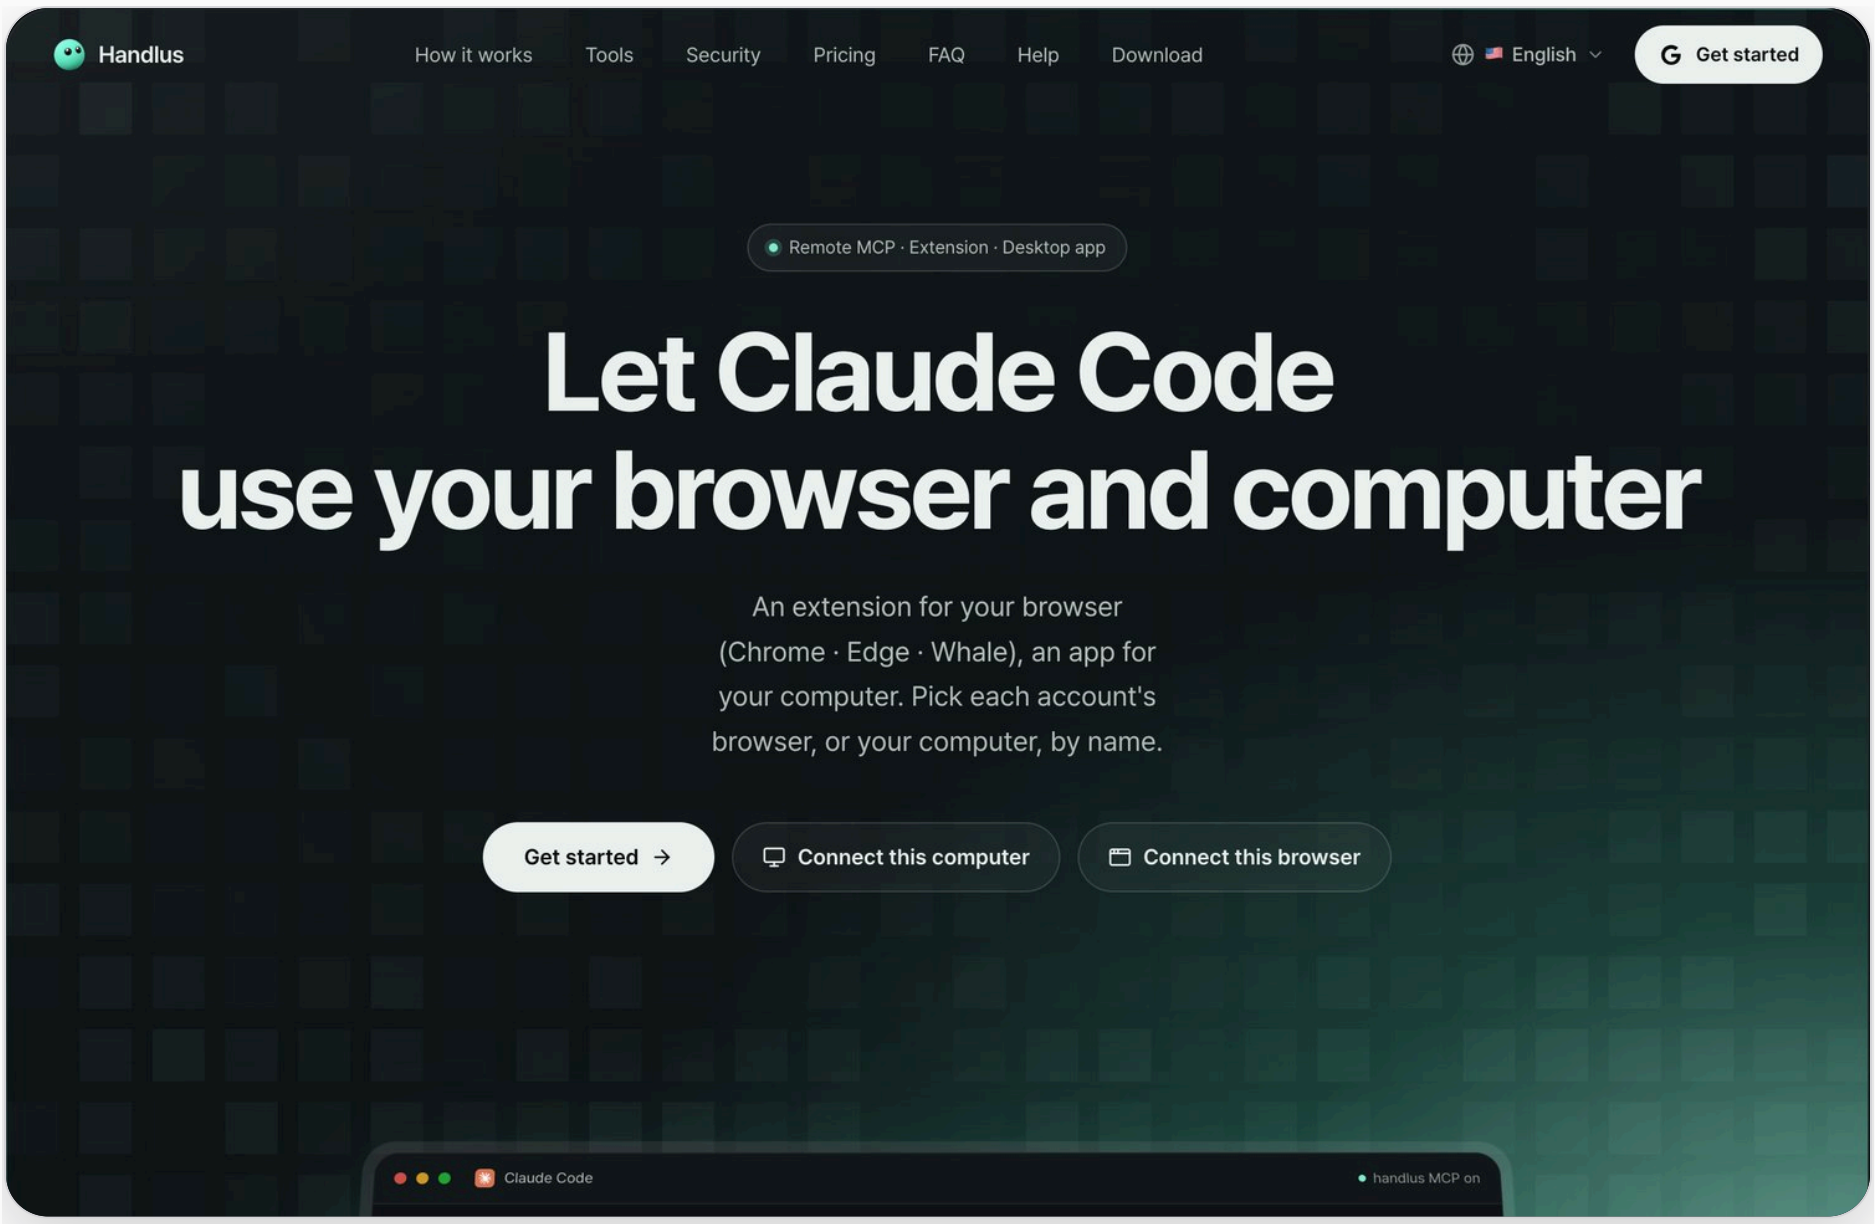

Handlus connects Claude Code to the browser you are already signed in to, and to the apps on your Mac or PC. Checked on handlus.com on November 16, 2026.

- **Free for one agent and 2 devices**
- **Chrome, Edge and Whale**
- **App for Mac and Windows**

Setup guide · November 2026

# What it is

Handlus is a browser extension and an app for your computer. **Claude Code** uses them to read pages behind your login, fill in forms, and then click and type in the apps on your Mac or PC.

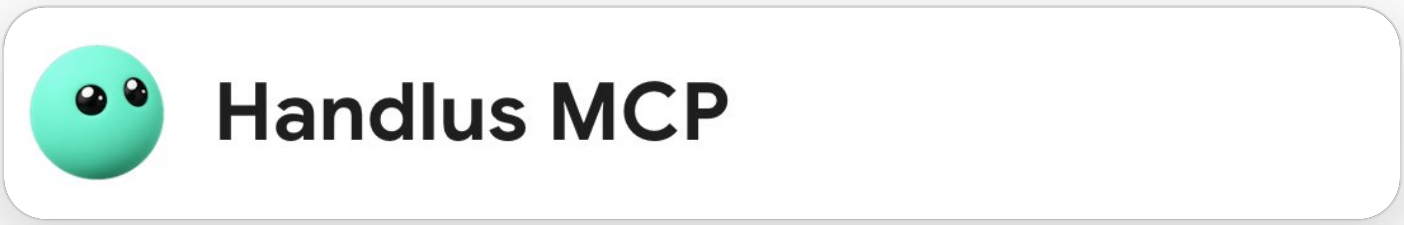

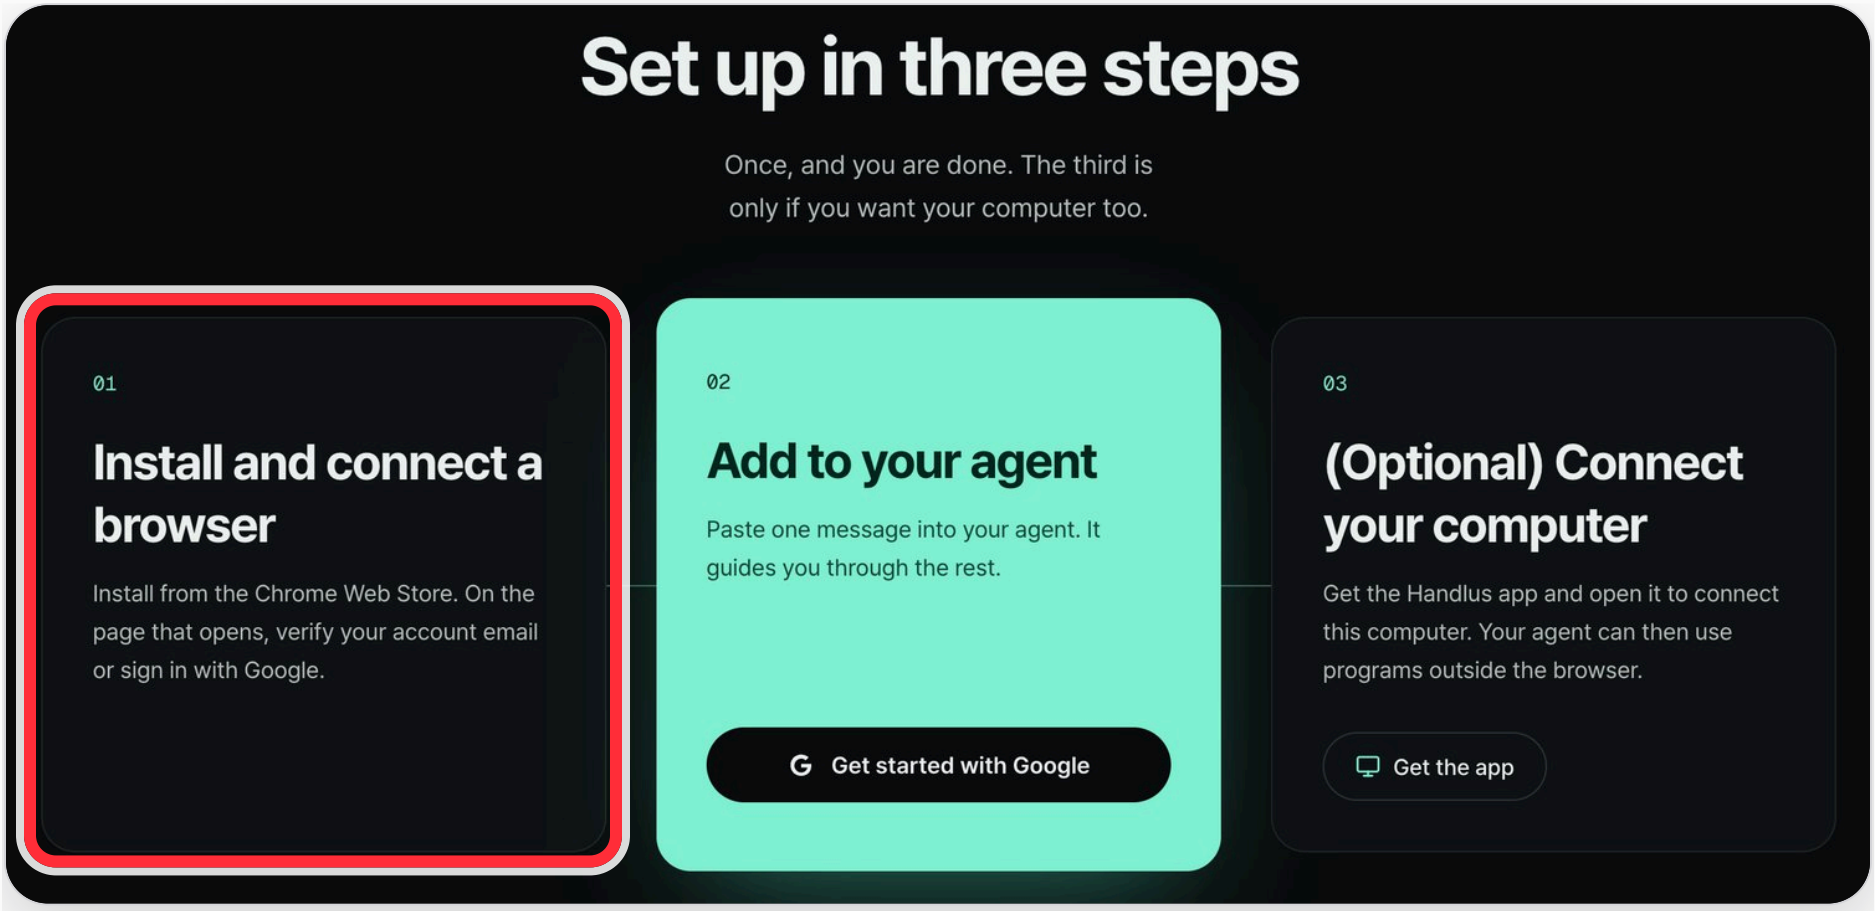

**You need:** Claude Code, Chrome (Edge and Whale work too), and a Mac or a Windows PC for the computer part. **What it won't do:** it stays out of your password and system settings apps, and it never touches your computer until you allow it. Payments and 2-step codes stay with you.

Step 1

# Add the extension

On handlus.com, click **Connect this browser**. It opens **Handlus MCP** in the Chrome Web Store. Add it, then on the page that opens, verify your email or sign in with Google. Once per browser.

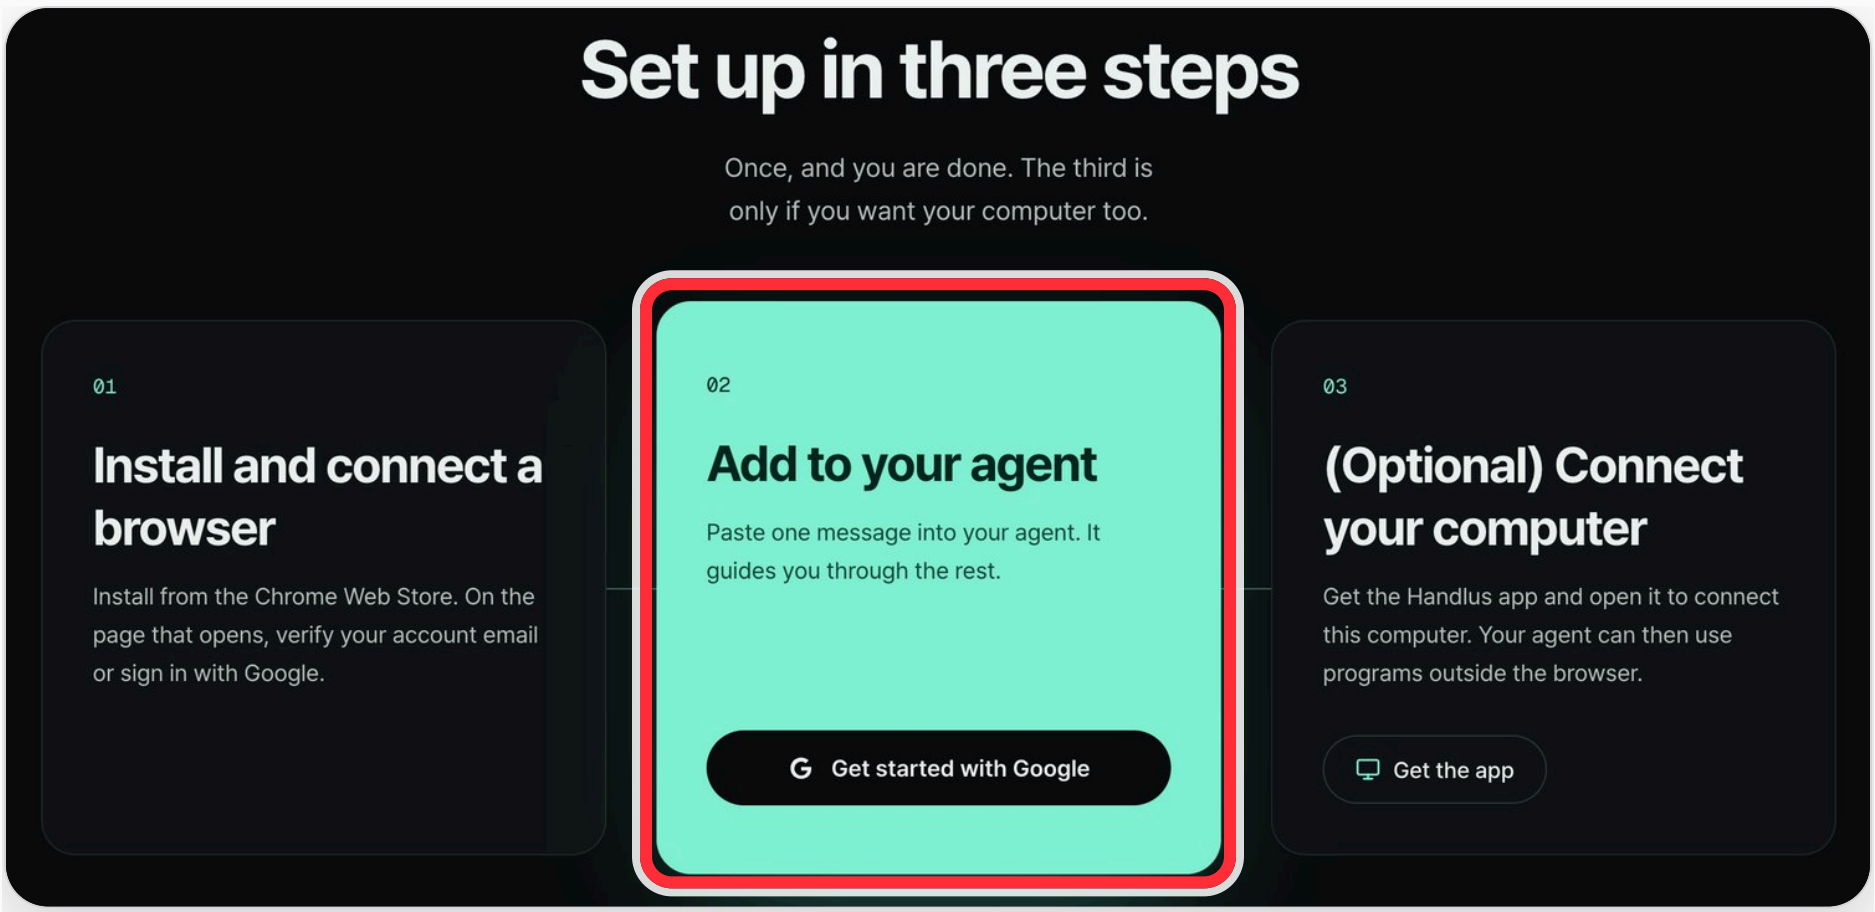

Step 2

# Paste one message

Sign in at handlus.com, open **Add to your agent**, pick **Claude Code** and copy the message. Paste it into Claude Code. It walks you through the rest, one step at a time.

If you only want the browser part, you can stop after the extension. The computer part is the optional third step.

Step 2

# What the message does

1 **Adds Handlus to Claude Code.**

When Claude Code asks "Do you want to proceed?", choose Yes.

2 **Installs the Handlus app.**

A page opens to connect this computer. On a Mac, turn on Allow, Accessibility and Screen Recording in the app window.

3 **Restarts Claude Code.**

Type `/exit`, then `claude -c` to come back, and say "done".

4 **Signs you in.**

Type `/mcp`, choose handlus, then Authenticate. Click **Allow** on the Handlus page in your browser.

5 **Checks it works.**

It lists your connected browsers, and your computer shows `[on]`.

It also asks before adding one line to your CLAUDE.md, and only adds it if you say yes. From the Handlus setup message for Claude Code, November 16, 2026.

The whole setup

# Save this text

```
LET CLAUDE CODE USE YOUR BROWSER AND YOUR COMPUTER (HANDLUS)

What you need:
- Claude Code (Codex and ChatGPT work too)
- Chrome (Edge and Whale also work)
- A Mac or a Windows PC, for the computer part

1. Add the extension
Go to handlus.com, click Connect this browser, and add it from
the Chrome Web Store. On the page that opens, sign in with
Google or verify your email. Once per browser.

2. Paste one message into Claude Code
In the Handlus dashboard, open Add to your agent, pick Claude
Code, and copy the message. Paste it into Claude Code. It adds
Handlus, installs the Handlus app on your Mac or PC, and walks
you through the rest one step at a time.
On a Mac, turn on Allow, Accessibility and Screen Recording
when the app asks. That is what lets it see and use your apps.
You can turn computer control off from the menu bar any time.
```

Three prompts

# Then try these

```
3. Three prompts to try (swap in your own pages)

Read and fill:
Use Handlus in my browser. Open [your dashboard page], read
this month's numbers, and tell me the total. Then fill in [the
form page] with that total, and stop before you press Submit
so I can check it.

Pop-ups, uploads and downloads:
Use Handlus in my browser. On [the page], upload [the file in
my Downloads folder], answer any pop-up that asks to confirm,
then download the report it makes and tell me where the file
went. Ask me before anything that sends or pays.
```

Three prompts

# And one on your computer

```
Into an app on my computer:
Use Handlus. Read the order list on [your orders page] in my
browser. Then on my computer, open TextEdit (Notepad on
Windows) and type a short summary: how many orders, and the
total. Don't save until I say so.

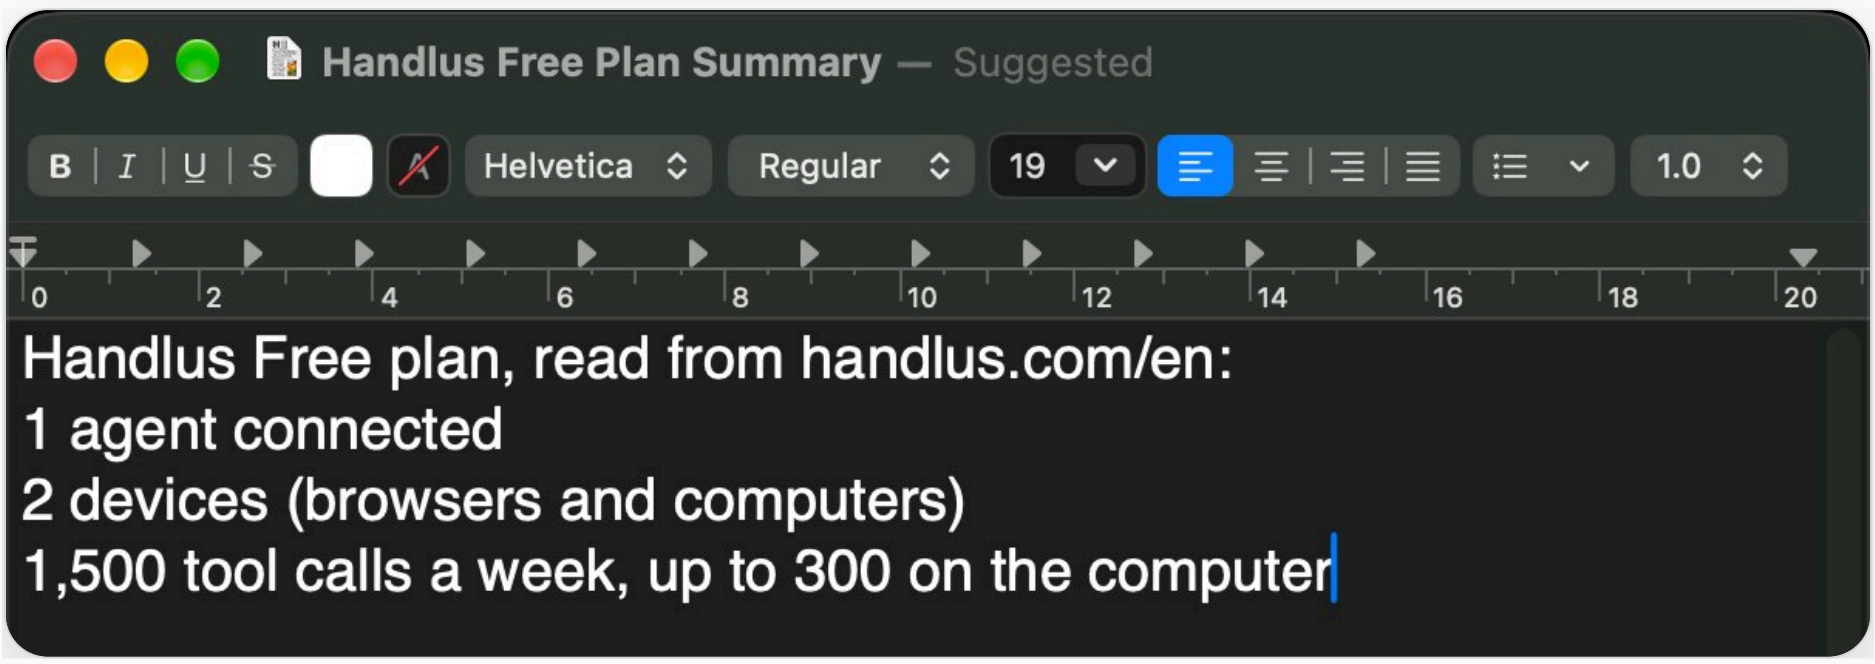

Handlus stays out of the password and system settings apps,
and it never touches your computer until you allow it.
```

Real run

# Into an app on our Mac

This is the connection check on our Mac. Then Claude Code opened TextEdit through the Handlus app and typed this in. We closed it without saving.

```
$ claude mcp get handlus
handlus:
  Scope: User config (available in all your projects)
  Status: ✔ Connected
  Type: http
  URL: https://api.handlus.com/mcp
```

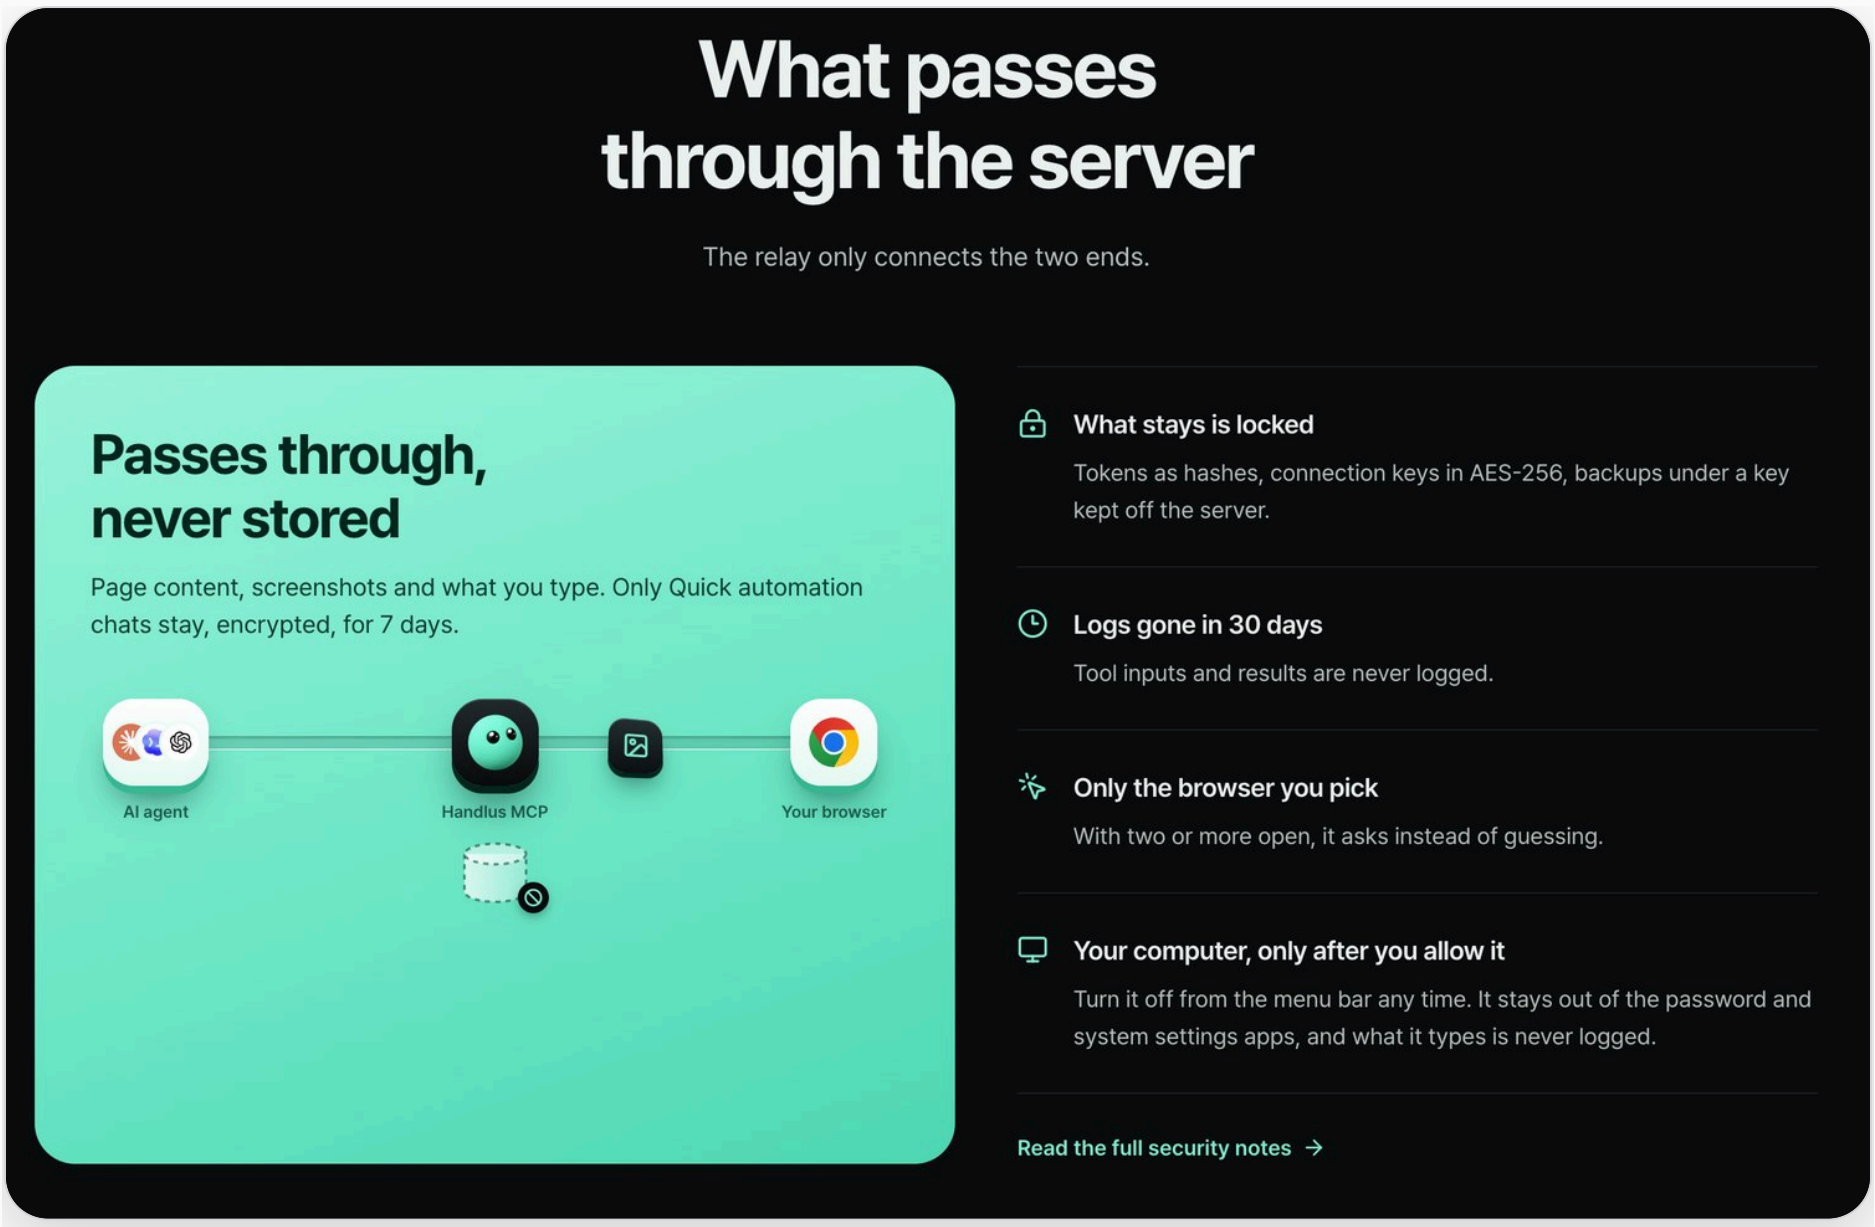

If it says **needs authentication**, type `/mcp`, choose handlus and Authenticate again. If Claude says no browser is connected, open that browser and check the extension is signed in.

November 16, 2026 · Claude Code on macOS

# What passes through

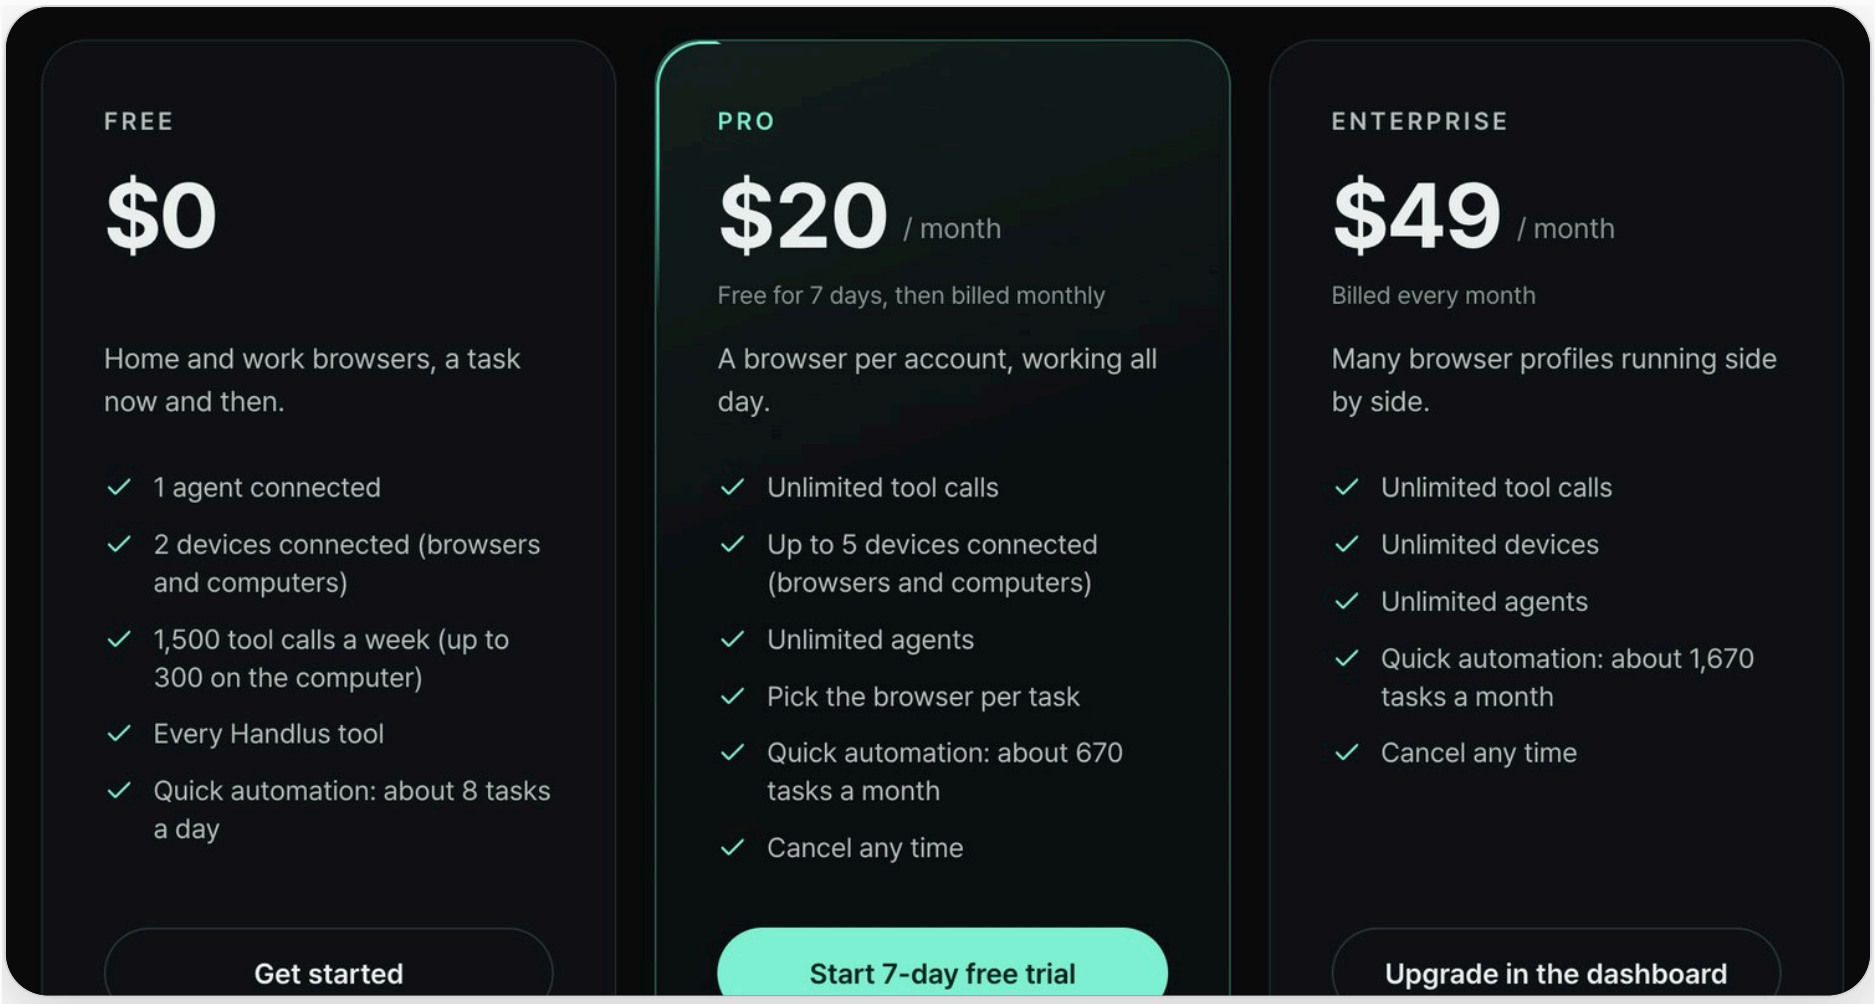

Handlus relays between Claude Code and your browser or computer. Page content, screenshots and what you type pass through and are not stored.

**The exception:** Quick automation chats stay, encrypted, for 7 days. Logs are gone in 30 days, and tool inputs and results are never logged. handlus.com/en, November 16, 2026.

# What's free

One agent and **2 devices** (browsers and computers together) are free. They share **1,500 tool calls a week**, up to 300 of them on the computer.

**Pro ($20 a month, 7 days free):** unlimited agents and tool calls, up to 5 devices. **Enterprise ($49 a month):** many browser profiles side by side. handlus.com/en, November 16, 2026.

# Good to know

1 **Your tab stays put.**

Pages open in a background tab, so you can keep working while Claude does.

2 **Name the browser.**

Say "Use Work to...". With two or more open, Handlus asks which one instead of guessing.

3 **The computer part has an off switch.**

Turn it off from the menu bar any time. It stays out of the password and system settings apps.

4 **Money waits for you.**

The prompts tell Claude to stop before Submit, and to ask before anything that sends or pays.

# Questions

### Is it free?

Yes for **one agent and 2 devices**, counting browsers and computers together. Pro is $20 a month.

### Which browsers?

**Chrome, Edge and Whale.** Install the extension in each one you want Claude to use.

### Do I need the computer part?

No. Without the app, Claude Code uses only your browser. The app runs on a Mac or a Windows PC.

### Does it work with other agents?

Yes. Codex, ChatGPT and Claude have their own steps under Add to your agent. This guide covers Claude Code.

# This DM came from an automation
